

# Neutron Scattering Summer School

June 6-12, 2004

*C. Glinka and D. Neumann, PI's, NIST - DMR-9986442*

The NIST/NSF Center for High Resolution Neutron Scattering's (CHRNS) 10<sup>th</sup> annual week-long summer school was held in conjunction with the American Conference on Neutron Scattering. Following a day of introductory talks, the class attended scientific sessions at the ACNS before being bussed to NIST for 3 days of hands-on training in neutron scattering techniques - a unique opportunity to become familiar with methods and their application to current research topics.

The 35 graduate students and postdocs, predominantly from U.S. chemical engineering and materials science departments, who attended the 2004 summer school pose for the traditional class photo along with many of the 18 NCNR/CHRNS staff who participated in the course.
